

This stuff follows me home!

I naturally go and seek things out and of course if I get to deeply involved, stuff just seems to jump into my truck and say “take me home”. Interested in what the differences between the early and late E31 rear and front subframes are, my truck was unusually full for the last 2 weeks!

My collection:

E31 later rear subframe complete with diff

E31 early subframe without diff (but one is in my shop)

Early front thrust arm cross member

Late “X” frame with complete engine subframe

**Rear subframe assemblies:
Late E31
Early E31**

Sway bar routing on late subframe

Sway bar routing on early subframe

**Early thrust arm mounting bar
Late "X" front frame**

Comparison of front anti-sway bar mounting position

Top early

Bottom late w/"X" frame

Front toward the right
